# Vivek Mani

Analytics Engineer | Data Engineering & BI Specialist

9920566657 | Vivekmani28@gmail.com | github.com/viv3kmani | Passport: Yes | Visa Status: Indian

## Synopsis

Analytics Engineer and BI Architect with 12+ years of experience engineering data solutions that eliminate manual effort, reduce costs, and accelerate decision-making at enterprise scale.

- ✓ **Snowflake Cortex Agent Evaluation Framework:** Developed an automated agent evaluation framework that replaced a planned 3-person manual evaluation process — saving 10–15 hours per evaluation run and potentially hundreds of hours across an agent's development lifecycle. Contributed to Hexaware's Snowflake Cortex Code Preferred Partner certification.
- ✓ **Power BI MCP + Cortex Code Documentation Framework:** Automated documentation of Power BI semantic models — eliminating recurring manual documentation effort each sprint.
- ✓ **Enterprise Analytics Foundation:** Built centralised analytics for a $22B+ revenue global QSR chain — unifying 13 Business Market Units on Microsoft Fabric and Power BI.
- ✓ **Version-Controlled ETL for Basket Analysis:** Engineered an innovative DEV → QA → PROD workflow on Microsoft Fabric, solving for the platform's lack of a native deployment pipeline — eliminating the need for a dedicated DE resource and avoiding a ~30-day project delay.
- ✓ **Power BI QA Analyser + Centralised BPA Tracking:** Automated report metadata extraction and enforced modeling best practices globally — significantly reducing QA manhours each sprint and improving validation accuracy.
- ✓ **OPS KPI Simulation Tool:** Delivered a self-service Power BI tool enabling franchisees to monitor performance across 14 KPIs and simulate their own Same Store Transaction Growth improvement levers.
- ✓ **Reporting Automation at AT&T:** Eliminated ~6,000 manual reports per month — freeing an estimated ~1,500 analyst hours monthly.
- ✓ **DOMO → Power BI Migration:** Migrated 40+ dashboards off DOMO — reducing BI platform licensing costs and consolidating onto the Microsoft stack.

## Certifications

| Certification | Issuing Organization | Year |
|---|---|---|
| Snowflake Advanced Data Engineering | Snowflake | 2026 |
| DBT Fundamentals | dbt Labs | 2026 |
| Snow Pro Core | Snowflake | 2024 |
| Certified Microsoft Fabric | Microsoft | 2024 |
| Microsoft DA-100 | Microsoft | 2022 |
| DOMO Editor | DOMO | 2019 |
| DOMO Master | DOMO | 2019 |

## Technical Skills

**BI & Analytics Tools**
- Power BI
- Microsoft Fabric
- DOMO

**Data Transformation & Modeling**
- SQL
- Snowflake
- Semantic Models
- Star Schema

**Data Engineering & Pipelines**
- ETL/ELT Pipelines
- Fabric Data Pipelines
- Deployment Pipelines
- Data Modeling

**Development & Tools**
- Python
- Git
- Docker
- Tabular Editor
- DBT

**AI Dev Tools**
- Snowflake Cortex Code
- Claude Code
- GitHub Copilot

## Professional Experience

**Softcrylic by Hexaware Tech Ltd.** — Dec 2022 – Present

**Lead - Data Science and Analytics | Global QSR Chain**

- Led analytics initiatives for a global QSR chain spanning **13 Business Market Units, 78 countries, 16,721 stores, and over $22 billion in revenue** — designed a scalable, cost-efficient, and user-friendly centralized reporting system using Microsoft Fabric, replacing fragmented regional reporting systems and establishing a single source of truth for global operations.
- Developed **OPS KPI Analytics solution** to analyze the relationship between operational KPIs and Same Store Transaction Growth (SSTG). Implemented store-level data imputation, Z-score normalization, and linear regression to derive coefficients. Built a dynamic **What-If Analysis** tool in Power BI enabling users to simulate how changes in 14 different OPS KPIs across market tiers impact SSTG — enabling franchisees to self-serve scenario simulations and identify their own performance improvement levers, reducing dependency on the analytics team for ad-hoc analysis.
- Developed a **Python-based QA Helper Tool** to scan Power BI project folders (.pbix), extract metadata (page visibility, bookmarks, perspectives, measures), and output to Excel for efficient report validation — reducing report validation from a manual, error-prone process to a structured automated one, improving turnaround time and accuracy of QA effort each sprint.
- Built comprehensive **Fabric Data Pipelines** for ETL processes across DEV, QA, and PROD environments with Deployment Pipelines for seamless artifact promotion — eliminating the need for a dedicated DE resource and avoiding an estimated ~30-day project delay.
- Leveraged **Fabric Semantic Link** with notebooks to execute rebinding commands, ensuring semantic models synchronize with correct warehouses per environment — ensuring zero manual intervention during environment promotions and eliminating the risk of semantic models pointing to the wrong warehouse in production.
- Conducted **Proof of Concept for Microsoft Copilot** integration with Power BI to assess effort and processes for global-scale implementation — providing leadership with a clear implementation roadmap for global-scale rollout.
- Built a **Snowflake Cortex Agent Evaluation Framework** using Cortex Code — fires questions from a configurable question bank at Cortex Agents in parallel, capturing full response telemetry per run (answer text, generated SQL, thinking traces, model used, tokens consumed, and latency). This telemetry is used to calculate **7 stability KPIs** (textual similarity, semantic similarity, thinking alignment, numeric consistency, SQL similarity, thinking trace similarity, and non-deterministic SQL detection), classifying each question as Stable, Borderline, or Unstable. A third stage identifies semantic view coverage gaps and generates actionable DDL recommendations, all surfaced through a **Streamlit dashboard** — **saving 10–15 manhours per evaluation run**; since multiple runs are required throughout an agent's development lifecycle, the framework represents a potential saving of **hundreds of hours per agent**. Contributed to **Hexaware earning the Snowflake Cortex Code Preferred Partner Badge**.
- Implemented **Power BI Best Practice Analyzer (BPA) rules** with a global tracking system via Fabric notebooks and lakehouses — enforcing modeling standards across the global team, reducing technical debt accumulation and reducing QA effort.
- Developed **BOGO (Buy One Get One) and Upsell** reporting logic through deep-dive analysis of product-level transaction data, identifying sales patterns and defining classification rules in **SQL and DAX** — enabling accurate promotional performance tracking that was previously unquantifiable.
- Provided version control POC demonstrating Git integration with Power BI for multi-developer collaboration and change tracking — laying the groundwork for a scalable multi-developer workflow with full change traceability.
- Identified and resolved tooling and architecture issues in third-party developed DOMO BI dashboards — restoring reporting reliability and unblocking business operations dependent on accurate dashboard data.
- Optimized reporting granularity, reducing inflated data storage and compute costs — directly reducing platform spend.
- Streamlined ETL processes for handling large datasets (~8 billion rows) using Snowflake — ensuring performant, cost-efficient data delivery at enterprise scale.

**Sutherland Global Services** — Oct 2021 – Dec 2022

**Associate Manager & Technical Architect – BI Development**

- Managed BI and data transformation projects, ensuring scalable and efficient data workflows.
- Managed **Power BI Premium capacity** for the organization, ensuring optimal performance and resource allocation.
- Implemented **Power BI Dataflows** as the primary data transformation tool, standardizing ETL processes across teams.
- Liaised with **Power BI Support** to optimize dataflow performance by identifying and reporting product gaps.
- Developed and published a **Best Practices Guide** for developers on Power BI data modeling and dashboard development standards.
- Led a team of 4 and supported 12 developers in building data-driven analytics solutions.

**Sutherland Global Services** — Jan 2020 – Oct 2021

**Lead Data Analyst**

- Automated manual reporting for AT&T, eliminating ~6000 manual reports per month.
- Built client-facing dashboards for Disney+, ESPN+, NHL Electric AI, and AOFL.
- Migrated 40+ dashboards from DOMO to Power BI, enhancing self-service analytics.

**Sutherland Global Services** — Apr 2018 – Jan 2020

**Senior Associate – Reporting & Analytical Services**

- Promoted based on performance rating of 4/5.
- Developed and optimized BI reporting solutions using DOMO.

**Sutherland Global Services** — April 2016 – Apr 2018

**Associate – Reporting & Analytical Services**

- Joined Reporting and Analytics through an IJP
- Automated Excel-based reporting processes, using tools like VBA and macros, MS Access

**Sutherland Global Services** — Sep 2013 – Apr 2016

**Associate – Customer Service**

- Handled Tech support for AT&T Uverse customers

## Education

**Bachelor of Computer Applications**
Chandigarh University
